

ZSB Portal

Step 0: Login to [Zebra](#).

Step 1: Deleting your old Zebra files.

1.a) Click on “My Data” on the left.

Connect your files to enable printing your data on designs.

Search files

Link File Upload File

FILE NAME	SOURCE	DATE ADDED
1 Bin Labels - Fashion .xlsx	Google Drive	Mar 31, 2026
2 Bin Labels - Piercing.xlsx	Google Drive	Mar 31, 2026
3 Bin Labels - Newness.xlsx	Google Drive	Mar 31, 2026
4 SKU Labels - Fashion .xlsx	Google Drive	Mar 31, 2026
5 SKU Labels - Piercing.xlsx	Google Drive	Mar 31, 2026
6 Bin Labels - NSO - Fashion.x...	Local File	May 6, 2026
7 Bin Labels - NSO - Piercing....	Google Drive	Mar 31, 2026

1.b) Click on the three dots for the old Zebra files you want to delete and select “remove”.

Connect your files to enable printing your data on designs.

Remove

ZEBRA

1.c) Click “remove linked file”.

1.d) Repeat for all old files until your data files are empty.

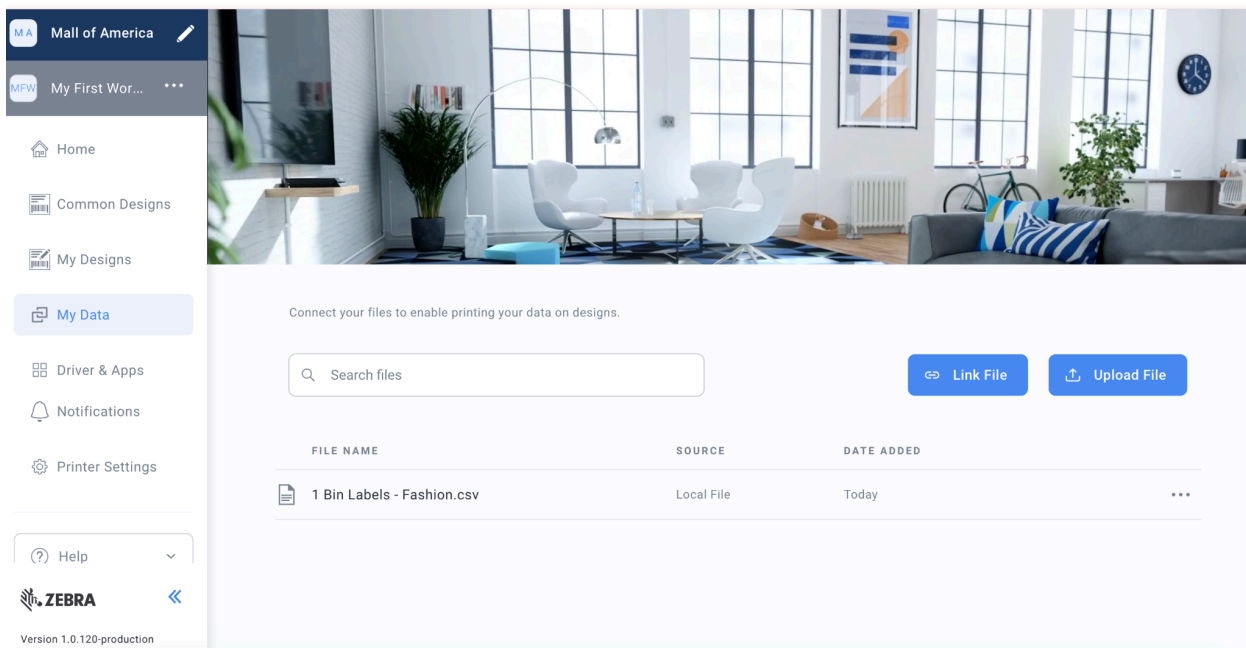

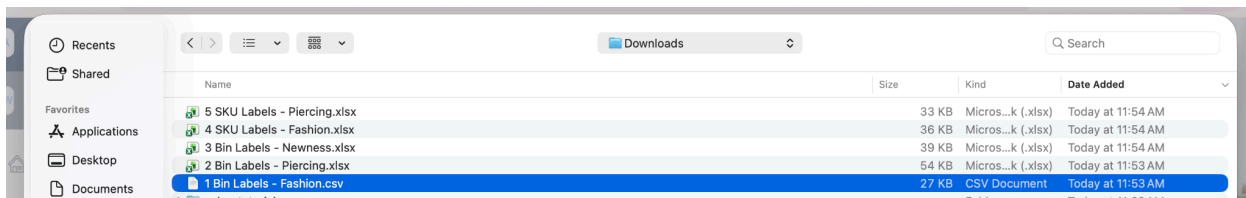

Step 2: Upload new data files.

2.a) Download the new data files to your computer.

(Here will be a screen that has a download file button that downloads all new data files. We will need to build in a backend function for HQ to upload those new files so we can leave this as a shell for now).

2.b) Click Upload file and double click on the first (of 5) files to drop it into Zebra.

2.c) Repeat this process until all five of the new Zebra files are in your portal.

The screenshot shows the 'My Data' page in the Zebra Design Studio. The left sidebar contains navigation links: Home, Common Designs, My Designs, My Data (selected), Driver & Apps, Notifications, and Printer Settings. The main content area has a header 'Connect your files to enable printing your data on designs.' with a search bar and 'Link File' and 'Upload File' buttons. Below is a table of uploaded files:

FILE NAME	SOURCE	DATE ADDED
1 Bin Labels - Fashion.csv	Local File	Today
2 Bin Labels - Piercing.xlsx	Local File	Today
3 Bin Labels - Newness.xlsx	Local File	Today
4 SKU Labels - Fashion.xlsx	Local File	Today
5 SKU Labels - Piercing.xlsx	Local File	Today

Step 3: Connect your new Zebra files to your Zebra templates.

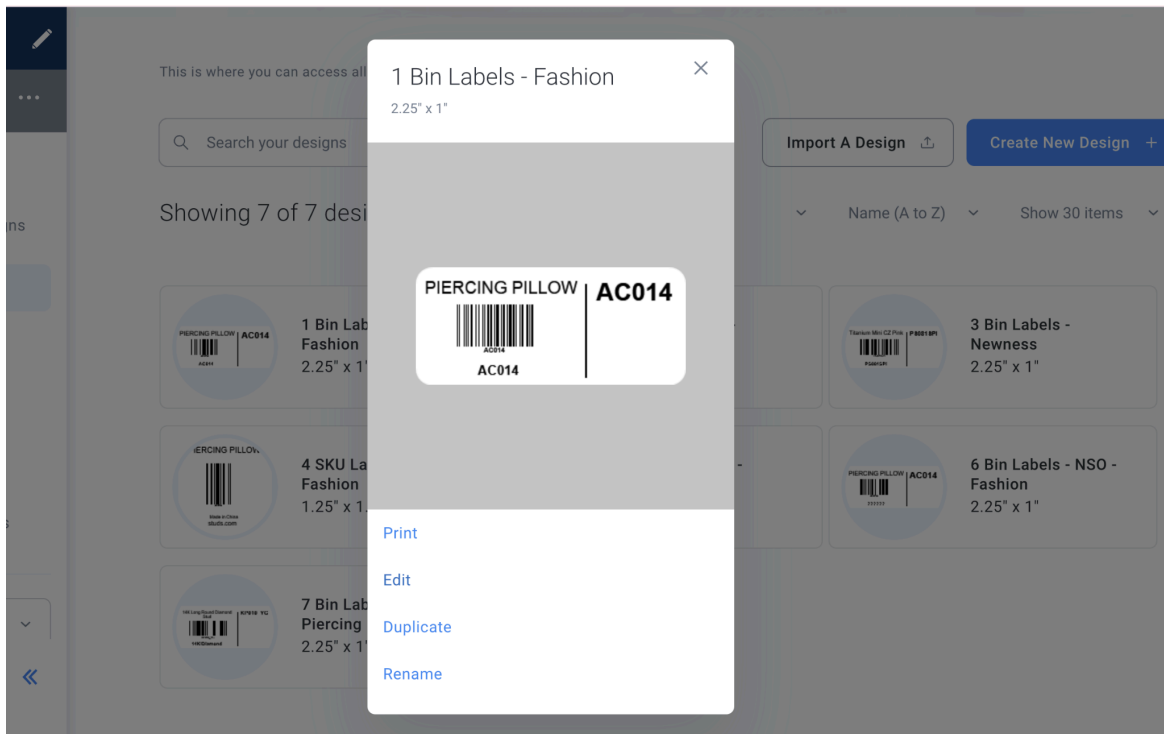

3.a) Click on “My Designs” on the left.

The screenshot shows the 'My Designs' page in the Zebra Design Studio. The left sidebar contains navigation links: Home, Common Designs, My Designs (selected), My Data, Driver & Apps, Notifications, and Printer Settings. The main content area has a header 'This is where you can access all of your saved designs.' with a search bar and 'Import A Design' and 'Create New Design' buttons. Below is a grid of saved designs:

Showing 7 of 7 designs

Design Name	Size
1 Bin Labels - Fashion	2.25" x 1"
2 Bin Labels - Piercing	2.25" x 1"
3 Bin Labels - Newness	2.25" x 1"
4 SKU Labels - Fashion	1.25" x 1.25"
5 SKU Labels - Piercing	1.25" x 1.25"
6 Bin Labels - NSO - Fashion	2.25" x 1"
7 Bin Labels - NSO - Piercing	2.25" x 1"

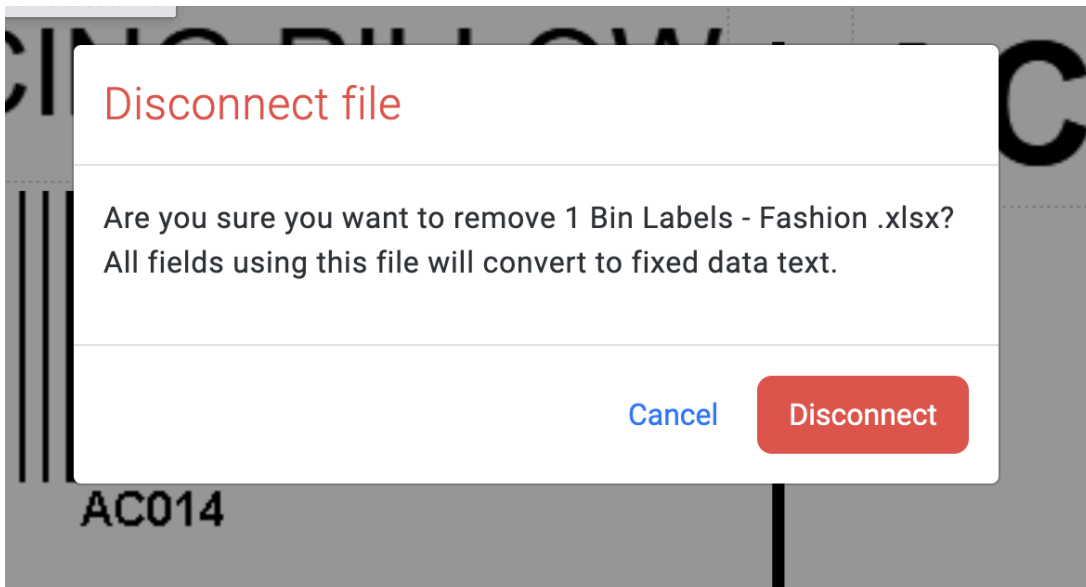

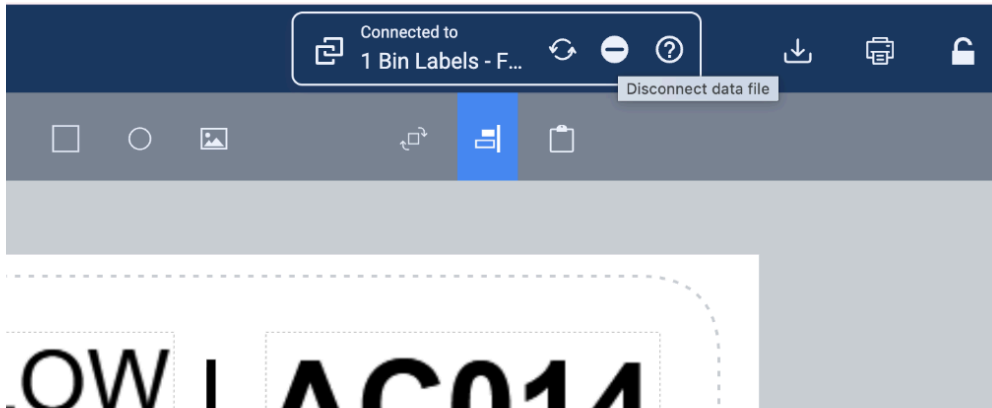

3.b) Click on your first label template (1 Bin Labels - Fashion) and click “Edit”.

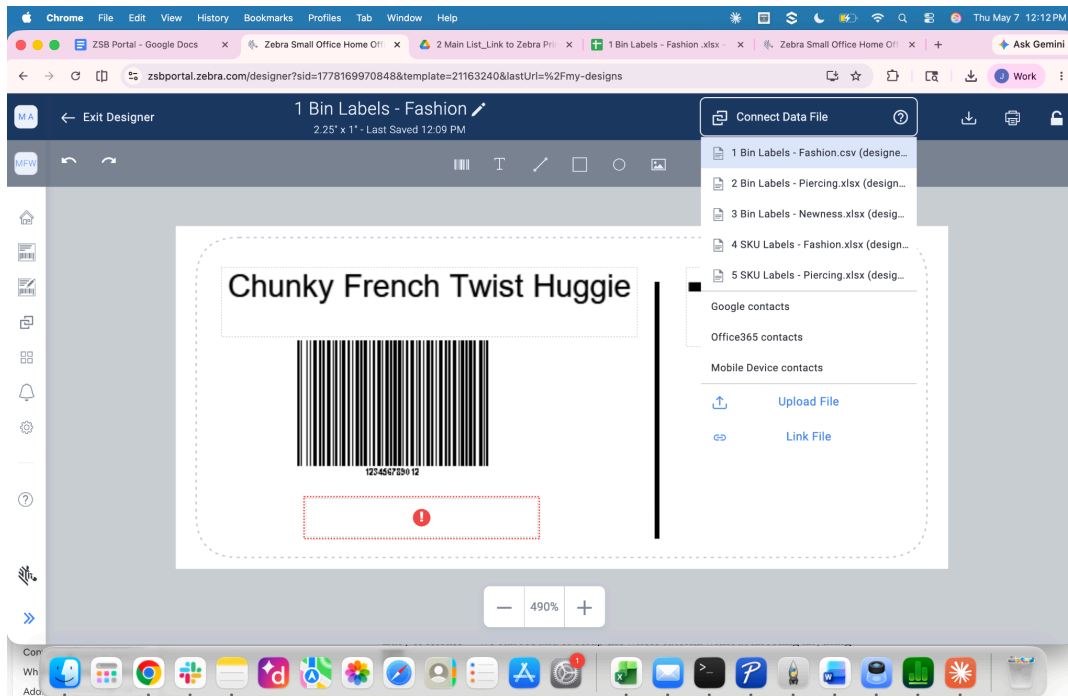

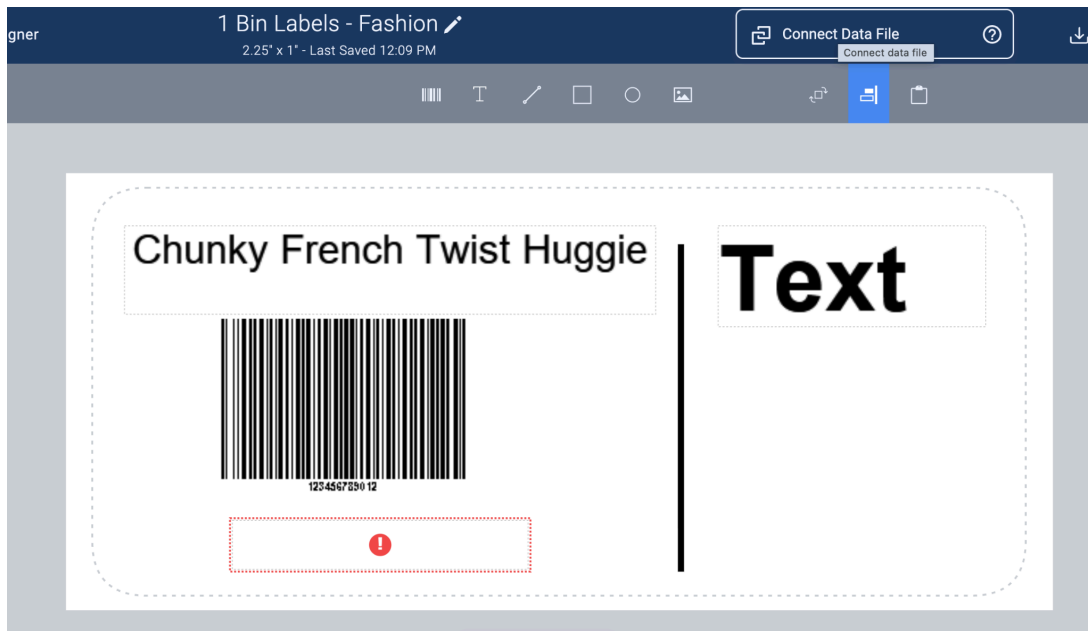

3.c) Click the Lock icon in the top right corner to unlock the design.

3.d) Click on the (-) button to disconnect the old data file and click “Disconnect”.

3.e) Click “Connect Data File” in the top right corner and select the correct corresponding data file that matches the title of the template you are in.

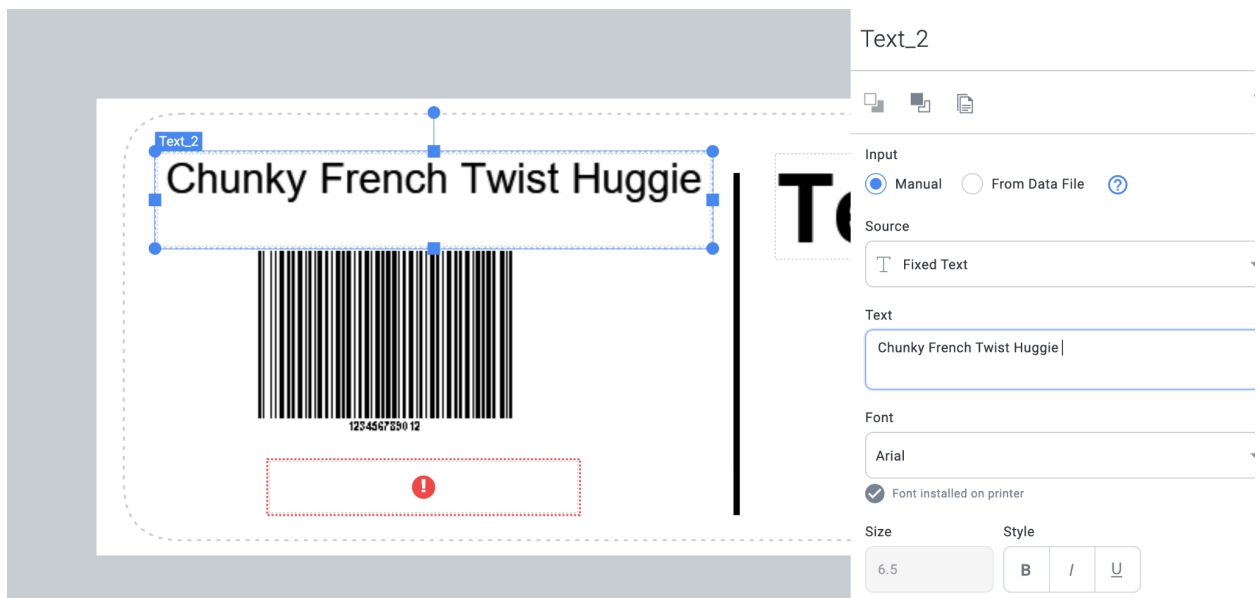

Step 4: Map your template fields to your data file.

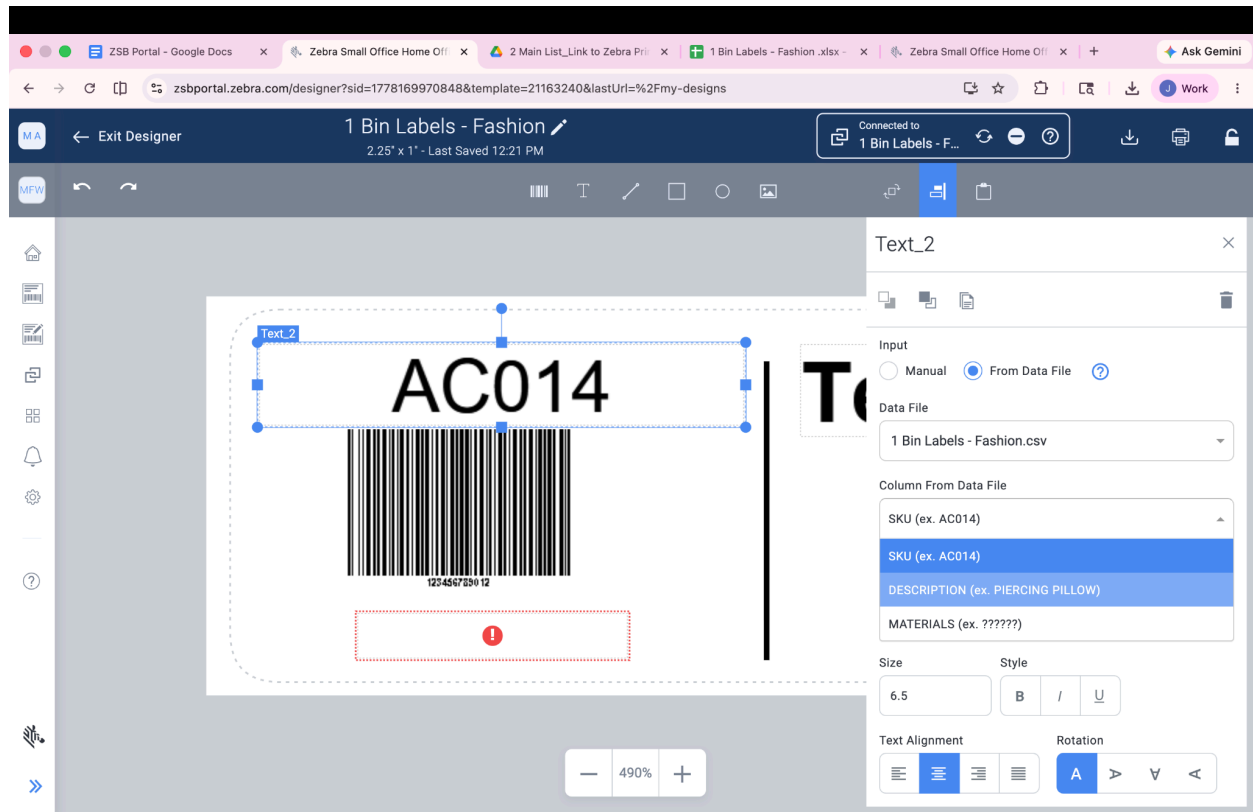

For bin labels, there are four fields you have to map:

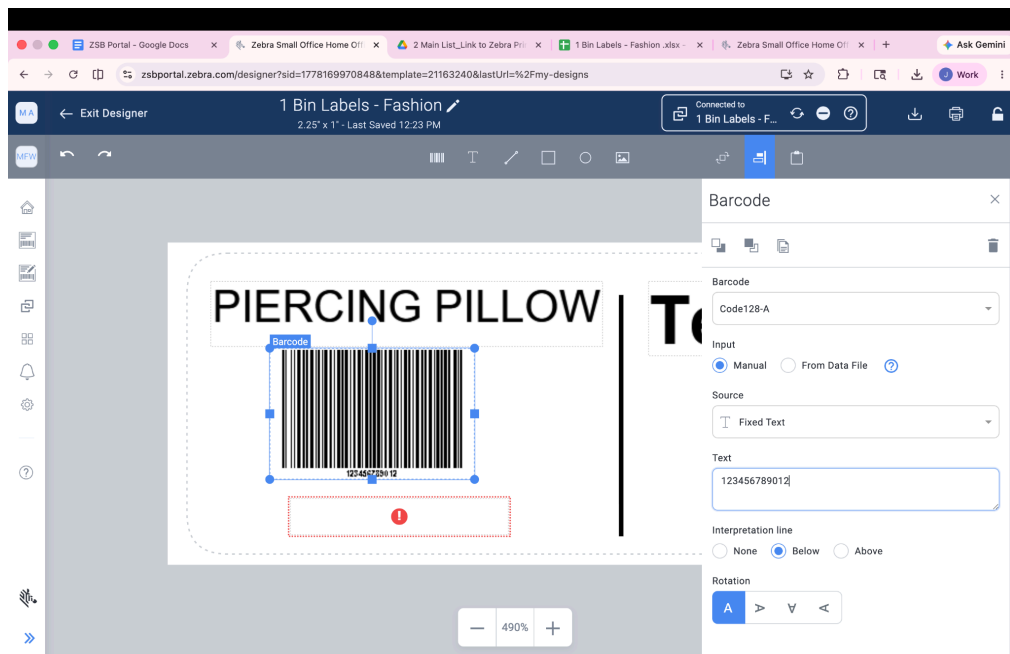

4.a) Click on your first field - the “Description” text box and switch the input from Manual to From Data File.

4.b) Then, change the “Column from Data File” from SKU -> DESCRIPTION.

4.c) You’ve successfully mapped your first data field! Now repeat these steps for the remaining three fields. Click on the SKU Barcode. Change the Input from “Manual” to “From Data File”. “Column from Data File” should be SKU.

4.c) It should look like this when done.

The screenshot shows a label design interface. On the left, a label template is displayed with a dashed border. It contains the text "PIERCING PILLOW" at the top, a barcode in the center, and the text "AC014" below the barcode. A red dashed box with an exclamation mark is positioned below the barcode, indicating an error or warning. On the right, a configuration panel is visible with the following settings:

- Barcode: Code128-A
- Input: ☒ From Data File
- Data File: 1 Bin Labels - Fashion.csv
- Column From Data File: SKU (ex. AC014)
- Interpretation line: ☒ Below
- Rotation: 0

The third field, "Materials", should look like this:

The screenshot shows the same label design interface as above, but with different settings. The label template on the left now shows the text "PIERCING PILLOW" at the top, a barcode in the center, and the text "AC014" below the barcode. A red dashed box with an exclamation mark is positioned below the barcode, indicating an error or warning. On the right, the configuration panel has the following settings:

- Input: ☒ From Data File
- Data File: 1 Bin Labels - Fashion.csv
- Column From Data File: MATERIALS (ex. ??????)
- Font: Arial
- Font installed on printer: ☒
- Size: 7.2
- Style: **B** / U

The last field should look like this, but with the SKU spelled out in text instead of as a barcode:

Text

Input

☐ Manual ☒ From Data File [?](#)

Data File

1 Bin Labels - Fashion.csv

Column From Data File

SKU (ex. AC014)

Font

Arial

☒ Font installed on printer

Step 5: Review & lock your changes.

When complete, your newly mapped bin label template should look like this. Hit the Lock Button in the top right corner again to lock in your changes and test print a label to confirm you've done it right.

You'll now click "Exit Designer" to leave this template and follow steps 3-5 for the remaining four templates.
